Workflow Engine

Workflow

Workflow Main - Tab1

- id
- Workflow name - text box (eg: AMC Enquiry - UCWF FM, AMC Enquiry - UCWF BM)
- Company - pull down (in case of multiple companies approval may be by different Managers for each company. (UCW Facility Management / UCW Building Maintenance)
- Profit Center (in case of multiple divisions in same company approval may be by differen Managers for each division.(Facilities Management / Building Maintenance)

Module - Pull down - Values object master

- Module - Pull down. values object master
- Object type - Pull down. Values from object master
- Form name - Pull down. Values from object master

Workflow sub - Tab 2

- Id
- workflow id
- Sequencer - text box auto number starting from one. Workflow start from one and continue as per the sequencer
- User Group - Pull down. Value from user privilege group
- User - Value form user (option to select multiple users if required. document will be available to all selected users)
- Action - Pull down
 - Create and Approve - selected user can create. Self Approval. End of workflow.
 - Create and Forward - Selected user can create and forward to next level for approval.
 - Approve - selected user can approve. End of workflow.
 - Approve and Forward - selected user can approve and forward to next level for further approval.
 - Create and Reference - selected user can create and send to next level for reference. No action at next level.
 - Reference - selected user can view. End of work flow.
 - Review and Forward - No action forward to next level.
- Text on button - The value typed in this text box will appear on button in form (example **Approve** if action is approve. **Fwd to Accounts** if action is forward)
- Approval Mode - Pull down
 - Form Approval
 - Field Approval
- Filed Name - Enable if approval mode is field approval. Else disable.
- Value from - Enable if approval mode is field approval. Else disable.
- Value to - Enable if approval mode is field approval. Else disable.
- Can cancel -pull down
 - Yes - Cancel button visible
 - No
- Can reject - pull down
 - Yes - Reject button visible
 - No
- Can edit - pull down
 - Yes - This user can edit the record. We may be able to define which fields can be edited.

- No
- Alerts - check boxes
 - In App
 - Firebase
 - SMS
 - Email
 - None

If value is not within the limit then approval button visible. User can approve. If value is beyond the limit then review and forward to next level.

Users and Data Security

Layer 1

User id

Password

Layer - 2 - Option 1

MAC address only

In this case the user can run the application only in one computer

Layer - 2 - Option 2

MAC address or One Time Password

If some one need to use the application in another computer he can choose OTP as the second layer

Table - User

User ID	Name	Password	Mobile	Mobile MAC	Web	Computer MAC	Security type	Remarks
Text box	Text box	Text box	Yes / No	Text Box	Yes / No	Text Box	Dopdown	
ASP001	Kevin Joshy	123	Yes		Yes		Password	One layer security. User can login with a password in any machine.
ASP002	Moly John	123	No		Yes	00-15-E9-2B-99-3C	MAC	Two layer security. User can login with a password only in one machine.
								Two layer security. User can login with a

ASP003	Dhanya Pramod	123	Yes	00:11:00:AA:BB:88	Yes	00-25-F8-3B-92-5G	MACOTP	password only in one machine. In another machine the user can login with password and OTP
